Product Change Announcement: Procell General Purpose transition to Procell

Constant

To whom it may concern,

This is to inform you that effective 12/31/2022 the Procell General Purpose AA, AAA, C, D, and 9V batteries will no longer be available and will transition to Procell Constant. The Constant design is a new formulation specifically designed for low/mid drain device applications. As part of this transition, there is new label artwork. The part numbers PC1400, PC2400, PC1400, PC1300 and PC1604 will remain the same as the current General Purpose product. The legacy codes, case and product UPC's will remain the same as well. The updated country of manufacturing, artwork and codes are all outlined in the appendix below.

This change is being implemented to complete the dual portfolio of Procell Professional batteries. Procell Constant batteries are designed to provide additional delivered capacity in low and medium drain applications. Procell Intense batteries provide additional delivered capacity for high drain applications.

All the Procell batteries are produced and assembled to Duracell's quality specifications and meet all the applicable ANSI specifications.

This change is part of our long-term strategy to provide seamless delivery of high performing products to our customers worldwide.

Please visit Procell.com for more information including datasheets, product information, article information sheets or declarations of conformity and contact your Duracell/Procell sales manager if you have further questions.
